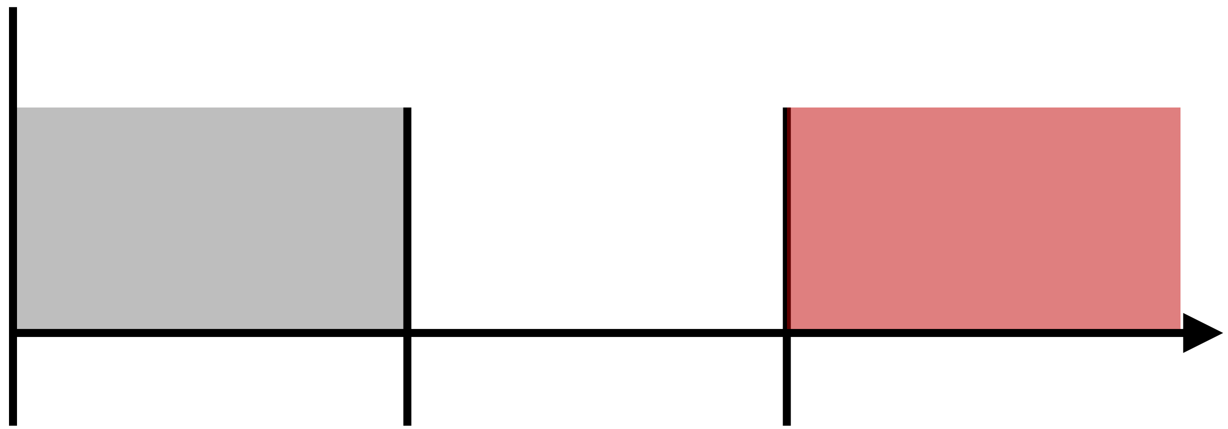
Lecture 17

Duality



Admin corner

- The experiment continues! **Slides** or **no slides**?
- Today's slides posted online

Midterms:

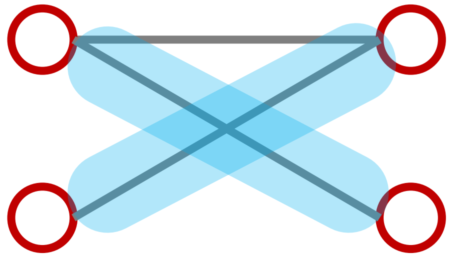
- Regrade request deadline has been extended to Tuesday evening. Get them in **asap**!
- Midterm 2 is in 2 weeks on Nov 7^{th}.
  - We will host review sessions! More details released next week.

Homeworks:

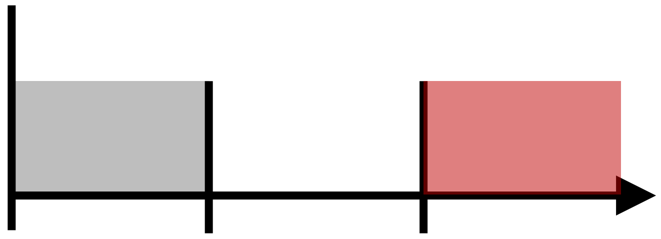
- Homework 9 will be released **tonight**
- Homework 10 will be released **next Monday**.

Outline

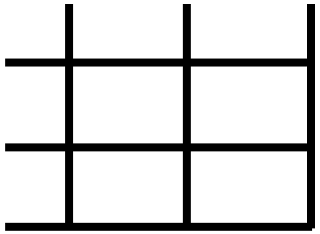
1. Bipartite perfect matching



2. Linear programming duality



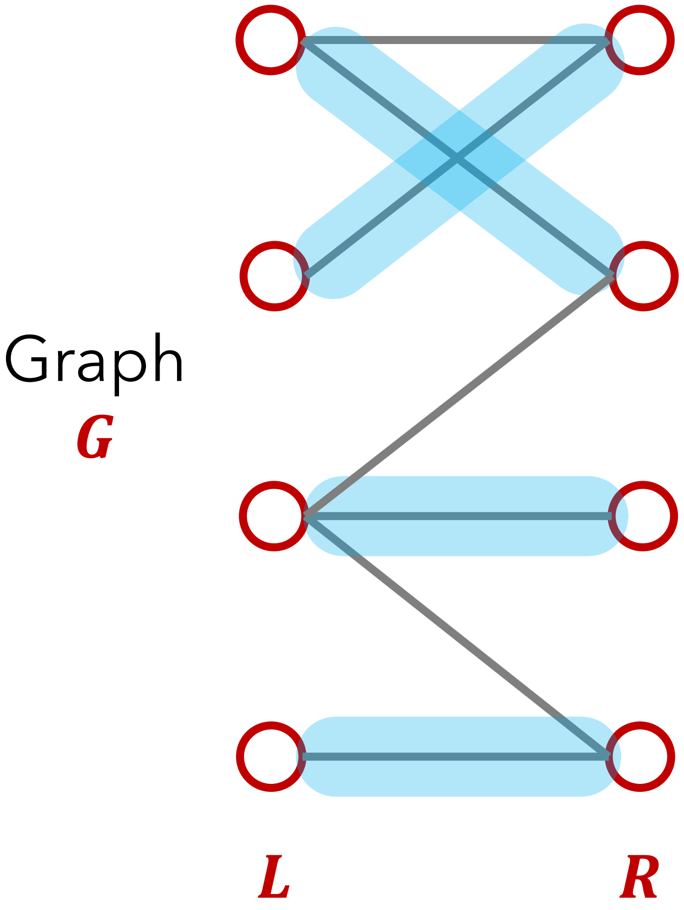
3. Zero-sum games



Bipartite Perfect Matching

Input: Bipartite (undirected) graph $G = (L, R, E)$ with $|L| = |R| = n$

Output: A perfect matching from L to R



Example:

L = UC Berkeley courses

R = UC Berkeley classrooms

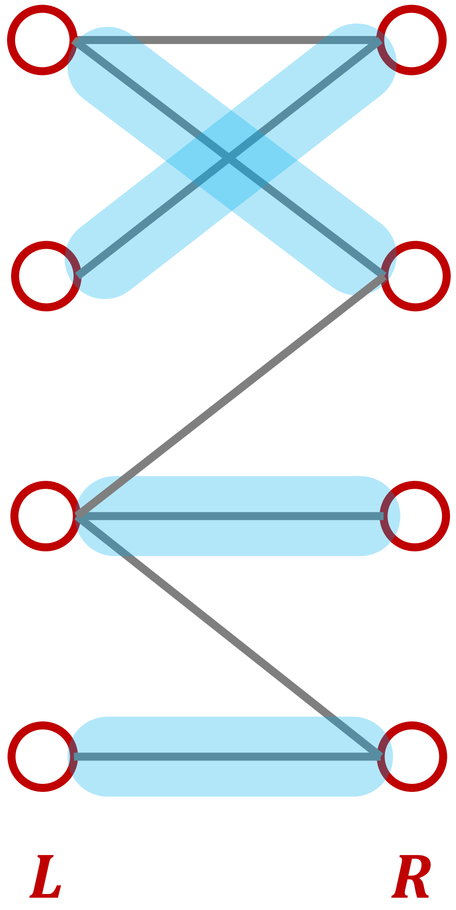
E = each course is connected to the classrooms it can be taught in

Q: Can we assign every course to a room?

Bipartite Perfect Matching

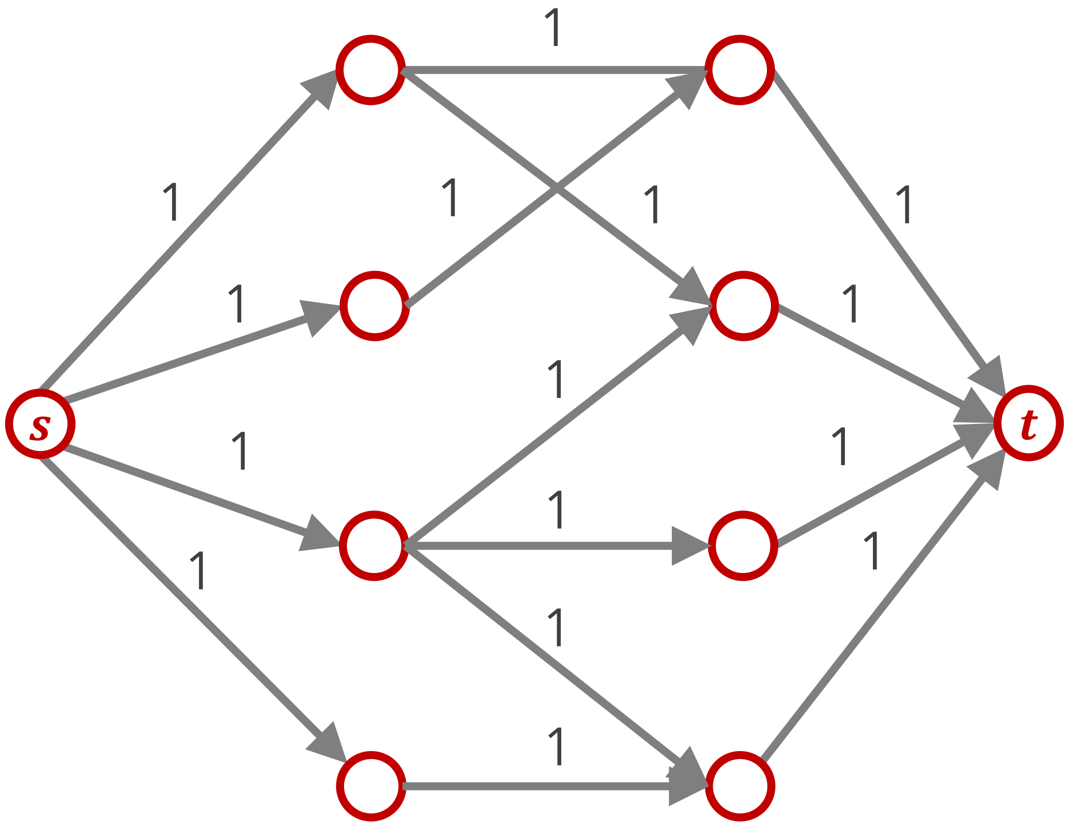
Input: Bipartite (undirected) graph $G = (L, R, E)$ with $|L| = |R| = n$

Output: A perfect matching from L to R



Graph G

Graph G'



Thm: G has a perfect matching $\Leftrightarrow$ Max-flow$(G') = n$

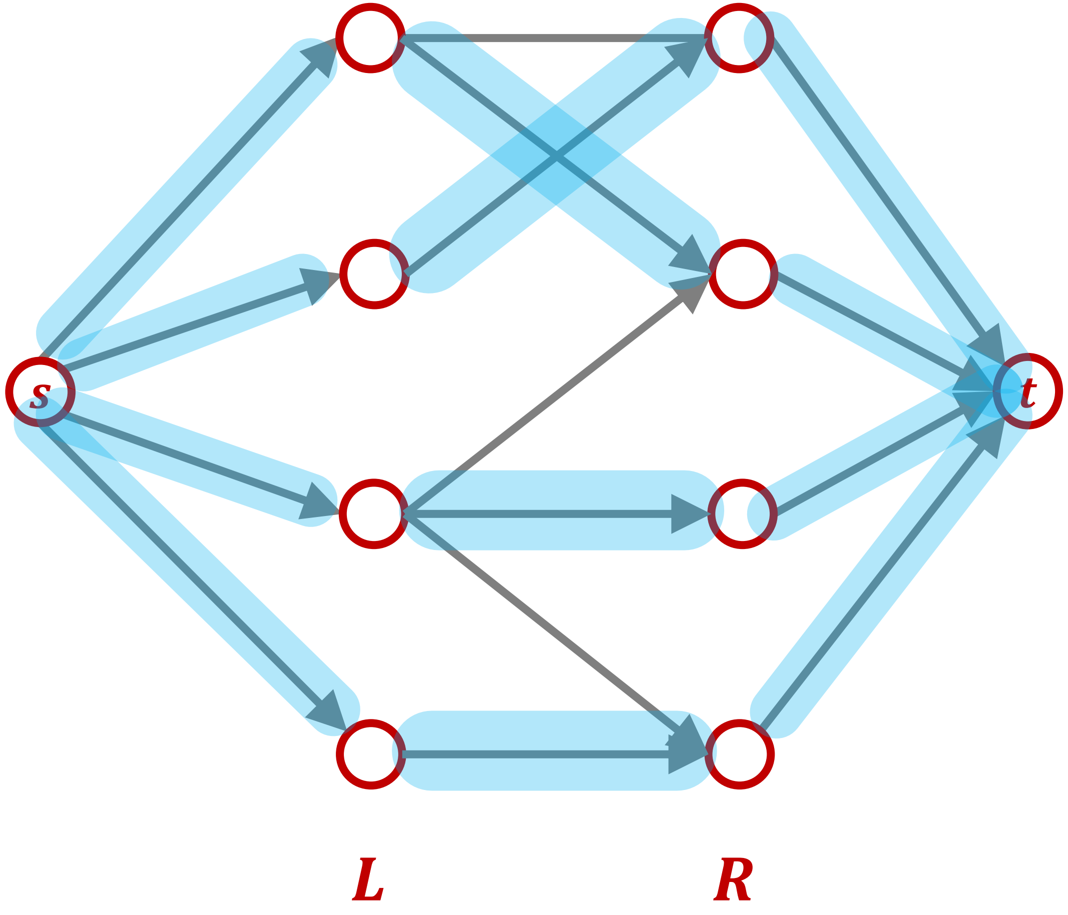
Thm: G has a perfect matching

$\Leftrightarrow$ Max-flow$(G') = n$

Pf:

Case 1: $(\Rightarrow)$ ☑

1. Let M be a perfect matching in G.
2. Put **1** unit of flow on every edge in **M**
   and every $s \to v$ edge
   and every $v \to t$ edge.
3. Then this is a flow of size n.



Graph G'

Thm: G has a perfect matching
$\Leftrightarrow$ Max-flow(G') $= n$

a "**reduction** from perfect matching to maximum flow"

Pf:

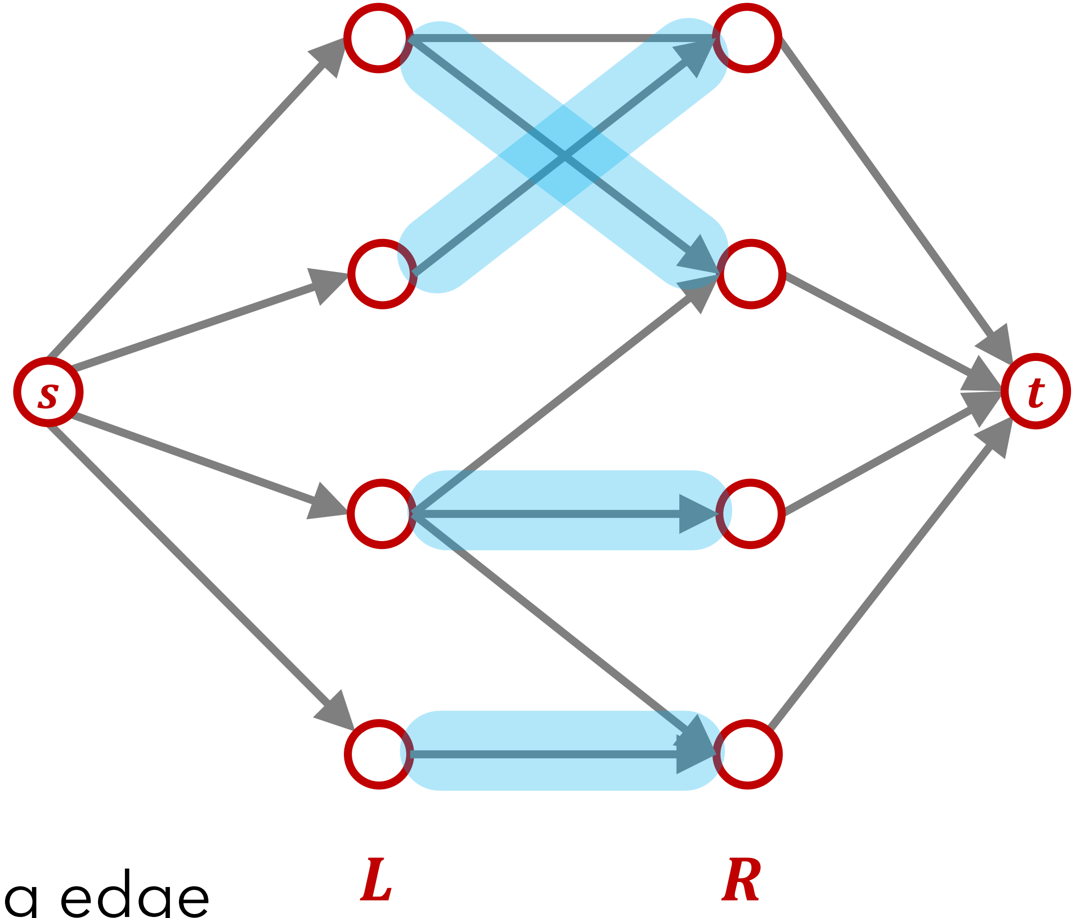
Case 1: ($\Rightarrow$) ☑

Case 2: ($\Leftarrow$) ☑

Recall from last lecture:

If the capacities are integral, then the Max-Flow is integral.

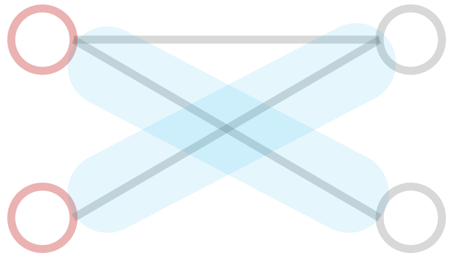
1. Let f be an **integral** flow of size n in G'.
   (all flow values 0 or 1)
2. Each $u \in L$ has **1** unit of flow on **1** outgoing edge
3. Each $v \in R$ has **1** unit of flow on **1** incoming edge
4. These edges form a matching of size n. $\square$



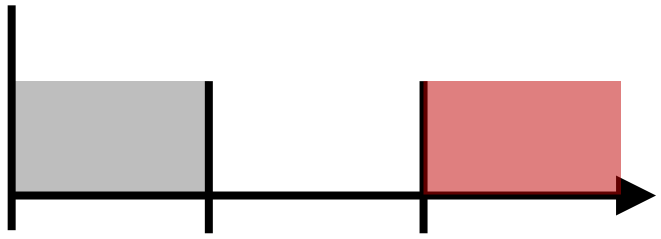
Graph G'

Outline

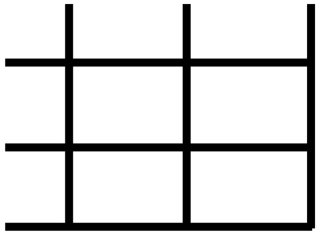
1. Bipartite perfect matching



2. Linear programming duality



3. Zero-sum games



Last class: Max-Flow = Min-Cut

Could always prove that a flow was **optimal** by showing a cut of the same value

This is a general property of LPs known as **duality**

The book calls duality a **magic trick**

$$
\begin{array}{llr}
\text{max} & 5x_1 + 4x_2 & \\
\text{s.t.} & 2x_1 + x_2 \leq 100 & \text{also} \quad x_1 \geq 0 \\
 & x_1 \leq 30 & x_2 \geq 0 \\
 & x_2 \leq 60 &
\end{array}
$$

Solution: $x_1 = 20, x_2 = 60, \text{value} = 340$

Q: Can we **prove** this is optimal?

$$
\begin{array}{lrcl}
\text{max} & 5x_1 + 4x_2 & & \\
\text{s.t.} & 2x_1 + x_2 & \le & 100 \\
 & (\ \ x_1 & \le & 30\ )\cdot 5 \\
 + & (\ \ x_2 & \le & 60\ )\cdot 4 \\
\hline
 & 5x_1 + 4x_2 & \le & \underbrace{5\cdot 30 + 4\cdot 60}_{390}
\end{array}
\qquad
\text{also}\quad
\begin{array}{l}
x_1 \ge 0 \\
x_2 \ge 0
\end{array}
$$

Solution: $x_1 = 20, x_2 = 60, \text{value} = 340$

Q: Can we **prove** this is optimal?

$$
\begin{array}{llr}
\text{max} & 5x_1 + 4x_2 & \\
\text{s.t.} & (2x_1 + x_2 \le 100) \cdot 3 & \text{also} \quad x_1 \ge 0 \\
& (x_1 \le 30) \cdot 0 & x_2 \ge 0 \\
+ & (x_2 \le 60) \cdot 1 & \\
\hline
\end{array}
$$

$$5x_1 + 4x_2 \le 6x_1 + 4x_2 \le \underbrace{3 \cdot 100 + 60}_{360}$$

Solution: $x_1 = 20, x_2 = 60$, value $= 340$

Q: Can we **prove** this is optimal?

$$
\begin{array}{llll}
\text{max} & 5x_1 + 4x_2 & & \\
\text{s.t.} & (2x_1 + \ \ x_2 \le 100) \cdot 5/2 & \text{also} & x_1 \ge 0 \\
 & (\ x_1 \qquad\ \ \le 30\ ) \cdot 0 & & x_2 \ge 0 \\
+ & (\qquad\ \ x_2 \le 60\ ) \cdot 3/2 & &
\end{array}
$$

$$5x_1 + 4x_2 \le \underbrace{\frac{5}{2} \cdot 100 + \frac{3}{2} \cdot 60}_{340}$$

Solution: $x_1 = 20, x_2 = 60$, value $= 340$

Q: Can we **prove** this is optimal?

Primal LP:

$$\begin{aligned} \max \quad & 5x_1 + 4x_2 \\ \text{s.t.} \quad & (2x_1 + x_2 \le 100) \cdot y_1 \\ & (x_1 \le 30) \cdot y_2 \\ + \; & (x_2 \le 60) \cdot y_3 \end{aligned}$$

also $x_1 \ge 0$, $x_2 \ge 0$

$$(2y_1 + y_2) \cdot x_1 + (y_1 + y_3) \cdot x_2 \le 100 \cdot y_1 + 30 \cdot y_2 + 60 \cdot y_3$$

Dual LP:

$$\begin{aligned} \min \quad & 100 \cdot y_1 + 30 \cdot y_2 + 60 \cdot y_3 \\ \text{s.t.} \quad & y_1, y_2, y_3 \ge 0 \\ & 5 \le 2y_1 + y_2 \\ & 4 \le y_1 + y_3 \end{aligned}$$

By construction: $5x_1 + 4x_2 \le 100 \cdot y_1 + 30 \cdot y_2 + 60 \cdot y_3$

Primal LP Opt $\le$ **Dual LP Opt**

Primal LP

max $\begin{bmatrix} \quad c^T \quad \end{bmatrix} \cdot \begin{bmatrix} x \end{bmatrix}$

s.t. $\begin{bmatrix} \quad A \quad \end{bmatrix} \cdot \begin{bmatrix} x \end{bmatrix} \leq \begin{bmatrix} b \end{bmatrix}$

and $\begin{bmatrix} x \end{bmatrix} \geq 0$

Dual LP

max $\begin{bmatrix} \quad b^T \quad \end{bmatrix} \cdot \begin{bmatrix} y \end{bmatrix}$

s.t. $\begin{bmatrix} \quad A^T \quad \end{bmatrix} \cdot \begin{bmatrix} y \end{bmatrix} \geq \begin{bmatrix} c \end{bmatrix}$

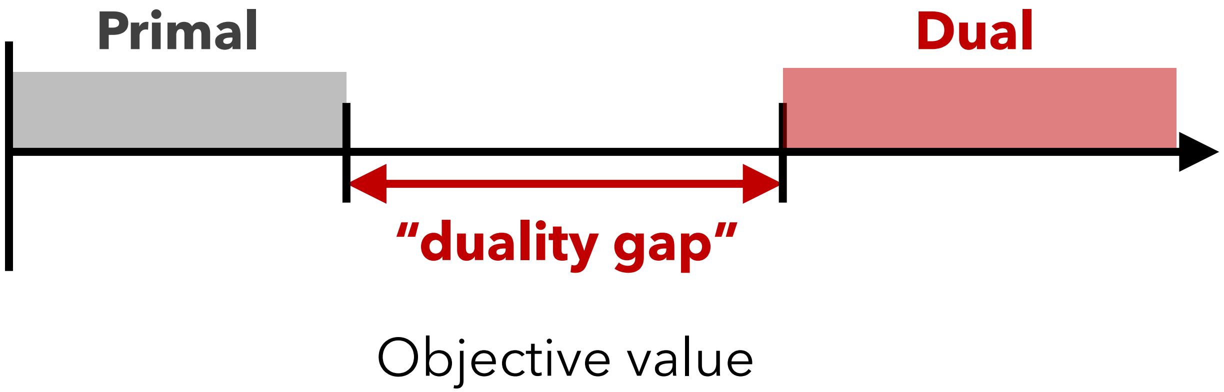
and $\begin{bmatrix} y \end{bmatrix} \geq 0$

Thm: **(Weak duality)** all feasible solutions $\boldsymbol{x}$ to primal LP $\leq$ all feasible solutions $\boldsymbol{y}$ to dual LP

Pf: $\begin{bmatrix} \quad c^T \quad \end{bmatrix} \begin{bmatrix} x \end{bmatrix} \leq \begin{bmatrix} \quad y^T \quad \end{bmatrix} \begin{bmatrix} \quad A \quad \end{bmatrix} \begin{bmatrix} x \end{bmatrix} \leq \begin{bmatrix} \quad y^T \quad \end{bmatrix} \begin{bmatrix} b \end{bmatrix} = \begin{bmatrix} \quad b^T \quad \end{bmatrix} \begin{bmatrix} y \end{bmatrix}$ $\square$

Cor: **Primal LP OPT $\leq$ Dual LP OPT**

Weak duality:



Thm: **(Strong duality)**

If the **Primal LP Opt** is bounded,
then **Primal LP Opt** = **Dual LP Opt**

∴ **duality gap** = 0

Example: Max-Flow **=** Min-Cut (in recitation)

LP $\xleftrightarrow{\textbf{dual}}$ **LP**

LP duality history

George Dantzig

Co-inventor of LPs, inventor of simplex, Berkeley grad student and faculty

Was taking a statistics class

Professor wrote two of the most famous unsolved problems in statistics on the board

But Dantzig arrived late, mistook them for homework

Turned in solutions a few days later, said they "seemed to be a little harder than usual"

LP duality history

George Dantzig

Co-inventor of LPs, inventor of simplex, Berkeley grad student and faculty

"Let me tell you about my newest invention: linear programming"

John von Neumann

All-time great mathematician

"Oh that!"

(Lectures Dantzig about linear programming for 1.5 hours, invents linear program duality)

"It's equivalent to zero-sum games, which I have also recently invented"
